Code

To make a splash screen, install flutter_native_splash package. Configure a YAML file with your splash screen attributes like color, logo, background image, branding, etc. and run “dart run flutter_native_splash:create –path=flutter_native_splash.yaml”.

```dart
import 'package:assignment_2_q_1/pages/login_page.dart';
import 'package:flutter/material.dart';
import 'package:flutter_native_splash/flutter_native_splash.dart';

void main() {
  WidgetsBinding widgetsBinding = WidgetsFlutterBinding.ensureInitialized();
  FlutterNativeSplash.preserve(widgetsBinding: widgetsBinding);
  runApp(const MainApp());
}

class MainApp extends StatelessWidget {
  const MainApp({super.key});

  @override
  Widget build(BuildContext context) {
    return const MaterialApp(
      home: LoginScreen(),
    );
  }
}

import 'package:flutter_native_splash/flutter_native_splash.dart';
import 'package:assignment_2_q_1/pages/logged_in_page.dart';
import 'package:assignment_2_q_1/pages/signup_page.dart';
import 'package:flutter/material.dart';

class LoginScreen extends StatefulWidget {
  const LoginScreen({super.key});

  @override
  State<LoginScreen> createState() => _LoginScreenState();
}

class _LoginScreenState extends State<LoginScreen> {
  final _formKey = GlobalKey<FormState>();
  final _emailController = TextEditingController();
  final _passwordController = TextEditingController();
  bool _obscurePassword = true;
  bool _isLoading = false;

  @override
  void initState() {
    super.initState();
    FlutterNativeSplash.remove();
  }
